🚀 The Grahamly User Guide

Welcome to Grahamly! Whether you are a startup scaling your product, an agency managing clients, or a team trying to escape chaotic email threads, Grahamly is your new digital headquarters.

This guide will walk you through the core features so you and your team can get up to speed in minutes.

🌟 What Can Grahamly Do For You?

Grahamly isn't just another to-do list; it is a complete workspace engine designed to eliminate friction and speed up your team. Here are the core functions it brings to your daily workflow:

- **Centralize Project Management:** Turn messy email chains into organized, drag-and-drop Kanban boards. Track Sprints, crush backlogged bugs, and know exactly who is working on what at any given moment.
- **Eliminate Bottlenecks in Real-Time:** Using the "War Room" and our live push notification system, blockers are resolved instantly. When a critical task moves or requires approval, the right people get pinged directly on their devices.
- **Secure Client & Team Separation:** Grahamly uses a powerful multi-tenant architecture. This means you can run entirely separate, private workspaces for different clients or departments without their data ever crossing over.
- **Organize Critical Assets:** Stop losing files in old chat threads. Store, organize, and share design files and documents directly within your secure workspace.
- **Analyze Team Velocity:** Automatically track how fast your team is resolving issues with dynamic weekly and monthly performance charts, giving you a bird's-eye view of your productivity.

🏢 1. Getting Started: Workspaces & Invites

Grahamly is built around private, secure groups. When you first log in, you need a place to work.

- **Creating a New Group:** Click "Create New Group". Type in your Company Name, select your industry Persona (e.g., Tech Startup, Sales Team), and define your custom trackers. Hit **Initialize Group** to build your workspace.
- **Joining an Existing Group:** For security, Grahamly uses an invite-only system. Your **Invite Code** is simply your company's exact name. Ask your Workspace Admin for the precise spelling (e.g., `Acme Corp`), and paste it into the "Join Group" field on the setup screen to securely access your team's data.

📊 2. The Overview (Your Home Base)

The Overview page is the pulse of your workspace. It's designed to give you instant clarity on your team's performance.

- **Task Velocity:** The central chart tracks exactly how fast your team is resolving issues. Toggle between **Weekly** (7-day view) and **Monthly** (30-day view) to spot trends and bottlenecks.
- **Quick Edits:** Need to rename a dashboard card? Hover over it and look for the **Pencil icon** 🖍️. Click it to give your dashboard sections custom, meaningful names.
- **Live Metrics:** Keep an eye on your Active Sprints and Backlogged Bugs directly from the main cards before diving deeper.

🏗️ 3. Projects (The Engine Room)

This is where the actual work gets done. Your Projects page transforms complex workflows into simple, visual boards.

- **The Kanban Board:** Click on an Active Sprint to open its board. You will see your tasks organized into columns (e.g., To Do, In Progress, Review, Done).
- **Drag and Drop:** To update a task's status, simply click, hold, and drag the card to the next column. The system updates automatically in real-time.
- **Adding Tasks:** Click the **+ Add Task** button at the top of any column. Fill out the title, description, and assignee to instantly drop a new assignment onto the board.

⚡ 4. The War Room & Real-Time Alerts

Never miss a critical update. Grahamly features a real-time notification system so you don't have to keep the dashboard open 24/7.

- **Enable Push Notifications:** Go to your **User Profile** and click the prompt to enable notifications. Accept your browser's permission request.
- **Instant Pings:** Once enabled, if a high-priority task is moved, a blocker is resolved in the War Room, or an admin tags you, you will receive a push notification directly on your laptop or mobile device lock screen.

📂 5. The Documents Area (Your Digital Backpack)

Keep all your project assets, PDFs, and design files in one centralized location.

- **Organization:** Click **New Folder** to create categorized spaces for your different departments or sprints.
- **Uploads:** Simply drag and drop your files directly into the Documents area. They are securely saved and instantly accessible to everyone in your authenticated group.

✨ Pro Tips for Success

1. **Everything Auto-Saves:** There is no "Save" button on the Kanban boards. When you drag a card or edit a task, Grahamly instantly saves it to the cloud.
2. **Context is Everything:** If you manage multiple spaces, your current Workspace Name is always visible at the top-left of the sidebar.
3. **Adaptive UI:** Grahamly remembers your preferences, including your Dark Mode settings and custom workflow states.
